

Omega Hard Print

Slideshow edition

Omega Hard Print

Print PDF slides and reports from markdown files.

- Converts markdown to HTML using mistune.
- Renders html with css/images/fonts to PDF using weasyprint.

Features

- Generate table of contents based on headers (mistune plugin)
- Use HTML file as title page or generate with title and optional subtitle at command line.
- Select document (landscape, widescreen, A4, 16x10)
- Set CSS variable values at command line.
- CSS for paged media (implemented by weasyprint) for page header/footer content and page styling.
- HTML manipulation for easier CSS styling
 - Grouping into divs based on header levels
 - Assigning ids based on div/page title
 - Previously implemented (in version 0.3) in the markdown parser, will be implemented as a separate html manipulation module later.

Future Features

- Template complex HTML documents using jinja and data files.
- Render graphs and tables using pygal (from the creators of weasyprint).
- Syntax highlighting for code blocks
 - Previously implemented using pygments.

Usage

Install module and run using uv or pip, or use the Containerfile to build a docker image.

For example, this readme was rendered using

```
docker run -it --rm -v $PWD:/work ohp \
  readme.md \
  --out docs/readme.pdf \
  -s docs/style.css \
  --title "Omega Hard Print"
```

Rendering slides

To render slides use a different layout and update your styles.

```
docker run -it --rm -v $PWD:/work ohp \
  readme.md \
  --out docs/slides.pdf \
  -s docs/style.css \
  -s docs/slides.css \
  --title "Omega Hard Print" \
  --subtitle "Slideshow edition" \
  --layout landscape
```
